

Pool with a View

THIS HOMEOWNER IN Pasadena, California, wanted a pool with smooth lines and an infinity edge to highlight the view of the city's downtown. The homeowner wanted to capture a clean and classic look, while providing the opportunity to swim laps for a little outdoor exercise.

LA Custom Pools and Spas Inc. first removed an all-tile pool to accommodate the new construction. The new pool was designed to extend over the hillside. With proper planning and expertise, the design/build team had no problem finding the ideal placement. To place the pool over the slope, 35 yards of concrete were poured for a base to support the negative edge and basin.

2,500 square feet of Italian hand-cut travertine was used for the coping and decking to give the product a very unique and elegant feel. The copious decking provided plenty of room to enjoy the California sunshine, while the pool's shape supplied a great environment for a workout. By paying attention to the details and capturing the view the homeowner desired, the designers ensured that the home not only fits beautifully in the natural surroundings, but that it also is harmoniously complemented by the picture-perfect poolscape.
